SKILLS:

Javascript, Typescript, Node.js, Nestjs, React.js, MongoDB, Python, Chatbots, RABBITMQ, KAFKA, GCP, AWS, Docker, Redis, Jenkins, Cursor, Copilot

PROFILE SUMMARY

Experienced Senior Full Stack Web Developer with immediate availability, skilled in building scalable web and chatbot applications. Strong background in JavaScript, Node.js, and modern frameworks. Passionate about integrating AI/LLM technologies into real-world products and staying current with emerging tech trends.

WORK EXPERIENCE

- **ValueLabs, Dubai** June 2022 - present
- **Webuildbots, Remote from India** April 2020 - June 2024
- **Skyrim Sdn Bhd, Kuala Lumpur, Malaysia** January 2018 - December 2020
- **Daffodil Software Ltd, Gurgaon, India** September 2015 - November 2017
- **GFN D'Selva Infotech, Noida Area, India** October 2014 - April 2015

KEY ACHIEVEMENTS

- Handled and fixed important data issues when analytics did not meet customer needs. Improved data accuracy and added new features to solve problems.
- Reduced company costs significantly by implementing Typesense, which decreased the number of calls to ChatGPT.
- Implemented RabbitMQ to improve message delivery across multiple channels.
- Developed a versatile bot extension platform that integrates with chatbots as an iframe, enabling functions like form submissions and secure data entry within a web-view popup.
- Segmented services in a distributed environment by allocating client-related tasks to Google Cloud Functions and scheduling tasks on a dedicated server connected via REST. Enhanced service consistency by developing an npm modules like SDK , a router builder, and a MongoDB driver.
- Implemented a comprehensive AI-driven platform featuring advanced NLP functionalities including intent detection, entity recognition, sentiment analysis, and GPT integration, enhancing the system's analytical capabilities also integration of MCP servers.
- Migrated the codebase from AWS to GCP using Kubernetes, significantly reducing operational costs.
- Migrated the database to MongoDB Atlas, implemented sharding, and restructured database partitions to allow each client to use a separate database, enhancing scalability and reducing latency. Optimized for high-volume clients, handling over 5 million messages within 10 days for certain clients.

KEY PROJECTS

Senior software developer | ValueLabs | ENBD Bank |

<https://www.emiratesnbd.com>

Over the past few months, I've assisted multiple teams in smoothly transitioning from Java to Node.js, as they are migrating all their projects to Node.js. I've also been learning and supporting the adoption of NestJS, which is new to me as well.

Technologies: Node.js, TypeScript, MongoDB, NestJS

Senior software developer | Webuildbots | Chatbot |

<https://www.logicdialog.ai>

A feature-rich chatbot with conversational AI, including labeling utterances, agent chat support, content management, third-party integrations, dynamic forms, rasa integration, NLP features, analytics, messaging queue, GPT and more.

Technologies: Node.js, React.js, Socket.io, TypeScript, Python, Rasa, MongoDB, Redis, BULL MQ, RABBIT MQ, GCP, Docker, Redis

Senior Backend developer | Skyrim | EPF Chatbot - for Malaysian Government

A chatbot designed to improve customer service for EPF, featuring mixed language support (English & Malay) and self-training AI engines.

Technologies: Node.js, React.js, Dashbot.io, Flowxo, Wit.ai, Dialogflow, AWS Server, FlowXO, Wit.ai

Senior Backend developer | Skyrim | On-prem chatbot |

<https://www.symprio.com>

A chatbot developed to address issues encountered in EPF bot, featuring dynamic forms, secret value masking, no button text limitations, a custom content management dashboard, single-click AI engine training, live agent support, and analytics.

Technologies: Node.js, React.js, Socket.io, Wit.ai, Dialogflow, Luis, IBM Watson, TensorFlow

Software Developer | Daffodil | Ecommerce Website |

<https://www.daffodilsw.com>

An e-commerce website where multiple stores can sell products, featuring translation support, backend web services, social site logins, and frontend UI development.

Technologies: Node.js, Angular.js 1.4, Koa.js, MongoDB, Elasticsearch, Socket.io

EDUCATION

B.Tech from UPTU, Radha Govind Engineering College

April 2013

- Percentage: 68%
- Information Technology

10th and 12th from CBSE Board, Suresh Chand Agrawal Memorial Public School
